**DETAILED ACTION**

***Allowable Subject Matter***

Claims 3, 5-11, 16-24, 38 and 40-42 are allowed.

With respect to independent claims 3 and 38, the prior art does not disclose, in the claimed environment, a bioreactor control system comprising a utility tower comprising a monitoring system that transmits information related to a condition of the bioreactor to a controller, a bioreactor supply system, and either an agitation system or temperature control system. The previously applied Zeitlin and Cannon references each teach that it is known to relay information from a reactor to a controller using a transmitting device. These references, however, do not disclose that the transmitting device is a separately housed utility tower that also is capable of supplying a substance to the bioreactors in response to the control signal. Furthermore, the prior art does not teach the use of a utility tower that comprises an agitation system, or a temperature control system capable of heating or cooling the bioreactors. The transmitting devices of the prior art simply convey information to and from the controller, and do not include physical fluid supply, agitation, and temperature control devices.

The Galliher (US 20080068920) reference describes relevant teachings regarding the use of a utility tower (see Figure 3), however Galliher is not prior art.

Throughout the course of prosecution, no rejections were made under 35 U.S.C. 102(f). A few documents were presented in various IDS submissions which suggested that perhaps the invention might have been invented by another. However, each of these assertions was directly, thoroughly and specifically contradicted by Applicant. Accordingly, there was never a

preponderance of evidence set forth in these disclosures to support a rejection under 35 U.S.C. 102(f).

### ***Double Patenting***

The previously applied double patenting rejections over the claims of copending Application No. 11/057,079 have been withdrawn in accordance with MPEP 804 and MPEP 1490.
